

Task Book: Guardian

App Description

Our App Rehnuma, as the name suggests, is a guide for you and your children to help them understand their sexual health, menstrual health and puberty better under your supervision. We provide parental controls to monitor your children's progress and articles you can read to help them understand these topics in a better manner and increase their learning. We also offer a platform to discuss your respective issues with other parents, learn from them, help them with their problems, and a list of safe, professional help you can reach out to in case of any health or mental related emergency.

Tasks

Disclaimer: After completion of each task, bring user back to the home screen/tell user to navigate back themselves
